

AMENDMENT TO THE SPECIFICATION

Please replace paragraph [0035] with the following amended paragraph:

[0035] The decision of where to store received emails is not just made when ~~they~~ the emails are received. As the system modifies its criteria based on new information observed from the user's behavior or other data it can re-classify email already received and possibly relocate the emails to the newly-appropriate directory or otherwise prompt the user to reconsider items of received email. Hence, new variables can be introduced to the classification algorithm as new considerations as determined to be relevant. Additional classification criteria may be obtained by allowing the user to adjust the level of spaminess that is required for placement of emails in say the gray or black folders. That allows for more detailed control for a user who wants to have a say in the risk involved in deleting spammy ~~email~~ emails without looking.
